Summary: SCE submits this report out of an abundance of caution because the incident may meet the technical reporting criteria. The Eaton Fire has received significant media attention and has caused property damage exceeding \$200,000. SCE received evidence preservation notices from counsel representing insurance companies in connection with the fire, and there are online publications that seemingly suggest SCE equipment may be

associated with its cause. Therefore, the incident is arguably ?allegedly attributable to utility facilities,? which technically triggers this report. To date, no fire agency has suggested that SCE?s electric facilities were involved in the ignition or requested the removal and retention of any SCE equipment. Additionally, preliminary analysis by SCE of electrical circuit information for the energized transmission lines going through the area for 12 hours prior to the reported start time of the fire shows no interruptions or electrical or operational anomalies until more than one hour after the reported start time of the fire. Aside from the preservation notices suggesting SCE?s potential involvement and significant media attention surrounding the fire, we do not believe this incident meets the reporting requirements.
