505 Van Ness Avenue
San Francisco, CA 94102

**SUBJECT: SAN DIEGO GAS & ELECTRIC COMPANY (SDG&E) DE-ENERGIZATION
REPORT**

Dear Ms. Malashenko:

In accordance with Ordering Paragraph (OP) 2 of Decision 12-04-024, SDG&E is submitting this report in response to the De-Energization Events that occurred in SDG&E's service territory on January 27-29, 2018. As noted in the reporting requirements, this report has been verified by an SDG&E officer in accordance with Rule 1.11 of the Commission's Rules of Practice and Procedure.

If you have any questions regarding this report, please contact Tim Lyons at (858) 654-6403, or at TLyons@semprautilities.com.

Sincerely,

/s/ Clay Faber
Clay Faber
Director — Regulatory Affairs

SDG&E Report on De-Energization Events: January 27-29, 2018

The following report is submitted in response to the De-Energization Events that occurred in SDG&E's service territory on January 27-29, 2018. SDG&E hereby submits this report to the Director of Safety and Enforcement Division (SED) and includes the following information pursuant to Decision (D.)12-04-024.

1. Explanation of SDG&E's decision to de-energize

Response:

The decisions to de-energize for public safety were made at SDG&E's Emergency Operations Center (EOC), which was fully staffed by a cross-functional team of electric operations, customer service, safety, engineering, external affairs, communications and other personnel, as well as a designated Officer-In-Charge (OIC). The EOC was activated at 11:00 p.m. on Saturday, January 27, 2018 in response to a Red Flag Warning (RFW) weather event declared effective at 7:00 p.m. on Saturday, January 27, 2018 by the National Weather Service (NWS). SDG&E activates the EOC to respond to qualified RFWs and other events to provide response coordination, ensure that an OIC receives operational updates, coordinate customer communications and regulatory and governmental notifications, and coordinate as-needed logistical support.

Official NWS forecasts indicated widespread wind gusts up to 55 mph with isolated gusts up to 75 mph. SDG&E's meteorologists' forecasts were similar, predicting widespread wind gusts 40-60 mph across the backcountry with isolated gusts up to 85 mph. The RFW, in combination with available data and real-time observations showing dire fuel-moisture content, strong winds, and extremely low relative humidity, indicated an elevated threat of large and destructive wildfires with rapid rates of spread and long-range spotting should an ignition occur. SDG&E determined that conditions warranted de-energizing certain facilities which might otherwise provide a source of ignition of a fire.

2. All factors considered by SDG&E in its decision to de-energize, including visual observations by pre-positioned and mobile field personnel where possible, wind speed, temperature, humidity, and vegetation moisture content in the vicinity of the de-energized circuits.

Response:

The decisions for SDG&E to de-energize circuits and tie lines were made due to extremely high winds and associated fire danger given the extremely low humidity and dry fuel conditions at the time, among other factors. In each of these events, SDG&E carefully reviewed the situation and ultimately decided to de-energize to protect public safety and longer-term system reliability. Key bases for these decisions included:

SDG&E Report on De-Energization Events: January 27-29, 2018

- The RFW issued by the NWS indicated that the combination of strong winds, low relative humidity, and warm temperatures would result in critical fire weather conditions with the potential for extreme fire behavior;
- The 7-Day Significant Fire Potential product issued by the Fire Weather Unit at the Southern California Geographic Coordination Center indicated a “High Risk” event with the potential for large fires, rapid rates of spread, and long-range spotting;
- The Santa Ana Wildfire Threat Index (SAWTI) was at Moderate (“Upon ignition, fires will grow rapidly and will be difficult to control.”);
- The Storm Prediction Center’s Fire Weather Outlook indicated critical fire weather conditions for portions of the SDG&E service territory;
- The Fire Potential Index (FPI) was at the highest end of elevated, indicating the potential for large fires should an ignition occur;
- The High Wind Warning issued by the NWS indicated the potential for damaging wind gusts up to 75 mph;
- Live Fuel Moisture values were below average (~65%) and Dead Fuel Moisture values were at or near record lows for late January;
- Critical fire weather conditions were occurring throughout the SDG&E service territory, including high winds, extremely low humidity and critically dry fuels;
- Recorded wind gusts around the de-energized circuits were in the high 50s, 60s, and/or 70s for several consecutive reads with some isolated gusts in excess of 80 MPH;
- Input from mobile field observers;
- Surrounding areas were forecast to and did see winds gusts exceeding 50 MPH;
- Fire-suppression-air resources could be unavailable due to high winds and time of day;
- The outages could be targeted to minimize impacts to customers; and
- A review of active outages on SDG&E’s system.

3. The time, place, and duration of the event.

Response:

Please see below for each separate De-Energization Event. Circuits marked with an asterisk (*) were not initially de-energized by SDG&E, but remained out of service due to fire risk.

Circuit	Start Date / Time	Communities	Final Restoration

SDG&E's De-Energization Events affected approximately 5,800 customers.

5. Describe any wind-related damage to SDG&E's overhead power-line facilities in the areas where power is shut off.

Response:

SDG&E crews patrolled the de-energized lines to ensure safe operating conditions prior to re-energization. Crews found no wind-related damage.

6. Provide a description of the customer notice and any other mitigation provided by SDG&E.

Response:

- a) SDG&E proactively reached out to customers who were affected by the event. Outreach was made via outbound dialer, email, mobile email/text messaging and personal phone calls.
- b) Nine custom messages and one standard message were used to communicate with customers who were de-energized. Different messages were developed to help customers understand the unique circumstances, and several customers received more

SDG&E Report on De-Energization Events: January 27-29, 2018

than one call. Please see Attachment 1.

- c) Several general customer communications were launched via SDG&E's website and social media.
- d) At the beginning of the event, an SDG&E representative went door-to-door to contact a total of seventy-six medical baseline and life support customers in all affected areas that were not reached by phone after multiple contact attempts once the Red Flag Warning was declared.
- e) SDG&E set up and staffed customer outreach sites in Julian and Campo. SDG&E provided customers with the following at the customer outreach sites: water and other beverages, ice, snacks, electronics charging stations, Wifi connectivity, and air-conditioned trailers.

7. Include any other matters that SDG&E believes are relevant to the Commission's assessment of the reasonableness of SDG&E's decision to de-energize.

Response:

- 35 SDG&E weather stations measured wind gusts equal to or greater than 50 mph;
- 11 SDG&E weather stations measured wind gusts equal to or greater than 60 mph;
- 2 SDG&E weather stations measured wind gusts equal to or greater than 80 mph, including a peak gust of 89 mph at Sill Hill;
- A 79-mph wind gust was measured by a UCSD/HPWREN weather station on top of Black Mountain before the metal structure it was on collapsed;
- The Sill Hill weather station measured wind gusts at or above 60 mph for 40 hours, and at or above 70 mph for 20 hours, and at or above 80 mph for 3 hours;
- A federally owned and maintained weather station in Viejas (Alpine RAWS) measured 9 hours of wind gusts at or above 60 mph including a peak wind gust of 68 mph;
- Broadcast media aired footage from Alpine, CA, of a gazebo that had been lifted by the wind from the ground and onto the roof of a house;
- Relative humidity as low as 1% was observed at the beginning of the Red Flag Warning;
- Numerous high temperature records were set during the Red Flag Warning, with some locations reporting temperatures in excess of 90 degrees;
- Incredibly, there have only been 2 days since March 1st (11 months ago) in which San Diego Airport has measured more than 0.25" of rain;
- It was the second warmest January on record in San Diego and likely the warmest March through January on record for the region.

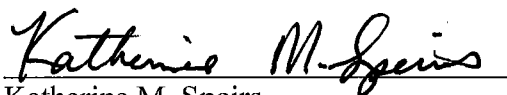

SDG&E Report on De-Energization Events: January 27-29, 2018

VERIFICATION

I am an officer of the applicant corporation herein, and am authorized to make this verification on its behalf. I am informed and believe that the matters stated in the foregoing document are true.

I declare under penalty of perjury that the foregoing is true and correct.

Executed this 9th day of February 2018, at San Diego, California.
