

Settlement Year 7 – Final Report
Progress Report to California Public Utilities Commission
Electric Vehicle Charging Station Project

For the period Jan 1, 2019 through September 5, 2019 (the Reporting Period)
Submitted September 5, 2019 by NRG Energy, Inc. on behalf of the Dynegy Parties¹

¹ Capitalized terms not otherwise defined herein shall have the meaning ascribed to such terms in the Long-Term Contract Settlement and Release of Claims Agreement by and among the California Public Utilities Commission and the Dynegy Parties dated April 27, 2012 (the “Settlement”).

INTRODUCTION

California's ambitious greenhouse gas (GHG) emissions reduction targets² have served as a catalyst for multi-agency focus on the transportation sector, which represent more than 40% of state GHG emissions.³ California leads the country in transportation electrification as evidenced by targets to place 1.5 million electric vehicles (EVs) on the road by 2025 and 5 million by 2030 and to install 250,000 battery electric vehicle chargers, including 10,000 direct current fast chargers, by 2025.⁴ Leadership from the California Public Utilities Commission (CPUC), the California Air Resources Board (CARB), the California Energy Commission (CEC) and private investment has supported transportation electrification funding to deliver more than 850 public direct current fast chargers (DC fast chargers or DCFC) in California.⁵

Meeting these goals requires sustained investments in public charging infrastructure, especially through public-private partnerships to leverage those dollars. The 2012 Settlement between the California Public Utilities Commission (CPUC) and certain NRG-affiliated entities requiring the NRG-affiliated entities to expend \$102.5 million toward deployment of EV charging infrastructure, marked the largest statewide investment to deploy a state-wide network of electric vehicle charging infrastructure at that time. Since then, EV charging deployments by NRG and EVgo Services LLC (EVgo)⁶ under the program have spurred a growing EV ecosystem that would not have been possible without such partnership. Today, more than 80% of California residents live within a 15-minute drive of an EVgo fast charger.

Under the Settlement, a total of 561 DC fast chargers have been installed across 250 sites, more than twice the originally specified 259 DC fast chargers. EVgo will have opened 162 fast chargers in 2019 at the conclusion of Settlement objectives and budget. This substantial increase in DC fast charger installations was made possible through cost efficiencies and an emphasis on larger footprint sites located in or near high concentrations of multi-unit dwellings (MUDs) where EV drivers are less likely to have access to home charging or onsite parking.

EVgo and NRG's massive deployment of fast chargers dwarfs proposed deployments in both speed and scale of delivery. In contrast, PG&E's DCFC Make-Ready Program plans to support 234 DCFCs over the course of five years. This program was approved in Spring 2018 and will not deliver a single DCFC until 2020. Similarly, SCE's Charge Ready 2 program, as proposed, would deploy 205 DCFCs over four years after approval by the CPUC. With more than 1,200 DC fast chargers operating across the nation, more than half of which are in California, EVgo continues to deliver expanded EV access and enable growing zero-emission vehicle (ZEV) penetration.

⁶ By agreement between NRG and EVgo, EVgo has undertaken the EV infrastructure deployment obligations owed by NRG under the Settlement as NRG's agent and with the requisite funding under the Settlement supplied by NRG. Once deployed, EVgo owns the EV charging infrastructure deployed pursuant to the Settlement.

Fast charging infrastructure is critical to reach California’s increasing population of EV drivers and is especially crucial to enable electrification for drivers without reliable access to charging at home or in the workplace, such as residents of MUDs who rely on public charging for the majority of their charging needs⁷, drivers who seek the convenience of charging while they shop, go to the park, library or community center, drivers who travel along key transit corridors, and light duty vehicle (LDV) fleets, including car sharing and ride sharing applications. Consistent with the Settlement’s specification for location of EV infrastructure deployment, EVgo has built the network to serve these needs. Across the state, 40% of sites deployed by EVgo under the Settlement are in low-income communities as measured by AB 1550⁸. Additionally, more than 20% of sites deployed under the Settlement are located in disadvantaged communities as measured by the CalEPA, California Communities Environmental Health Screening Tool 2.0 (CalEnviroScreen).⁹

Additionally, EVgo and other network operators continue to expand access for drivers through bilateral interoperability agreements, such as those EVgo has announced with ChargePoint, EVConnect, and Electrify America.¹⁰ These agreements will provide EVgo customers with access to thousands more fast charging and level 2 (L2) stations these networks operate, in addition to more than 750 EVgo DC fast chargers across the U.S.

The partnership between the CPUC, NRG, and EVgo has enabled these seismic shifts in the EV charging sector, creating a market for away-from-home charging and yielding real air-quality benefits. The network of chargers deployed through the Settlement has translated into 49 million electrified miles and 11,000 metric tons of GHG emissions reductions across California.

As California’s electricity grid continues to decarbonize¹¹, EVgo is doing its part, and in 2019 it announced that it has contracted for 100% renewable energy to power its customers across the country, becoming the first EV charging network in the United States to do so. In California, it is procuring 100% in-state solar renewable energy credits (RECs) and intends to purchase

⁸ AB 1550 defines low-income communities as census tracts with median household incomes at or below 80% of the statewide median income or with median household incomes at or below the threshold designated as low-income by HCD’s State Income Limits

bundled renewable energy from its partners as they become certified through CARB’s Renewable Energy Pathways program.¹²

The Settlement has been a demonstrable success in public policy, jumpstarting an industry, and delivering infrastructure well beyond requirements set in the Settlement, while piloting new technologies. The experiences gained under the Settlement are foundational in California’s EV landscape and provide valuable learning for the years of EV supply equipment (EVSE) investment still to come. Moreover, we believe that the Settlement provides many lessons learned that will be incorporated into other states’ policies and programs. This report will summarize the fulfillment of Settlement objectives as of the Reporting Date, September 5, 2019 (the Reporting Date), and EVgo looks forward to continuing to build on the progress to date.

** EVgo has completed work and will not receive final building inspection until the utility scope of work is complete, anticipated end of September

Table 3. Summary of Fulfillment of Settlement Obligations

As represented above, 481 DC fast chargers under the Settlement are already operational, with another 86 in various stages of interconnection or completion. Regarding compliance targets, the last LA Freedom Station build and EV Opportunity targets have completed construction and await final building inspection, utility interconnect, or utility-side construction completing to close out all compliance obligations (i.e., they are effectively constructed).

INSTALLATION OF PUBLIC EV CHARGING STATIONS (FREEDOM STATIONS)

As of the Reporting Date, 218 Freedom Station sites¹⁶ are constructed delivering 418 DC fast chargers. This marks the fulfillment of all regional targets, low-income PUMA targets of 20% by region, and an incremental 18 Freedom Stations beyond the original compliance target set forth in the Settlement.

While not a requirement of the Settlement, at the request of the CPUC, NRG and EVgo have tracked Freedom Station installations against the CalEnviroScreen (CES) tool and AB 1550, two leading California designations benchmarking equity in access. That tracking shows as follows:

- 20% of Freedom Stations (43 of 218) in disadvantaged communities per CES 2.0
- 22% of Freedom Stations (47 of 218) in disadvantaged communities per CES 3.0
- 40% of Freedom Stations (88 of 218) in low-income communities compared to AB 1550

Fulfillment of geographic distribution and low-income PUMA is reflected in the Tables below. Completed Freedom Stations as of the Reporting Date are listed in [Appendix A](#).

INSTALLATION OF HIGH-POWER CHARGING PLAZAS (HPC PLAZAS)

On behalf of NRG, EVgo has exceeded the requirement of 10 HPC Plazas with at least 30 DC fast chargers as of the Reporting Date, with a total of 58 DC fast chargers at 14 HPC Plazas which have received final building inspection.¹⁷ These HPC Plazas are located in the top 50% of California PUMAs ranked by percentage of residents in multi-family housing, of which, 21% of completed sites are in low-income PUMAs.

EV OPPORTUNITY PROJECTS

The two approved Opportunity Programs, Green Raiteros, and Equal Access Charging Hub (EACH), were established in 2017 and continue to support EV adoption and public benefits across the State.

Green Raiteros

The Green Raiteros Pilot Project has been executed in partnership with the San Joaquin Valley Latino Equity Advocacy & Policy Institute (the LEAP Institute), the Fresno County Rural Transit Authority (FCRTA), and the Shared Use Mobility Center (SUMC).

The Green Raiteros Pilot builds on an existing grassroots ridesharing program comprised of retired Valley farmworkers—the *Raiteros*—who offer rides for community members without access to transportation to and from work, medical appointments, or other needs. Green Raiteros expands access to carbon-free mobility in the Central Valley by strategically and sustainably introducing EVs to the Raiteros’ services and was recently covered by [UpLiftCA](#).

This project has successfully:

- Converted an existing mobility service to provide all-electric rural ridesharing.
- Supported the renovation of the Romualdo M. & Imelda C. Leon Community and Mobility Center which includes 10 L2 Electric Vehicle Charging stations open to the local Huron community and the EV driving public.
- EVgo has also installed two DC fast chargers in downtown Fresno that are supported for ongoing operations.
- Established and developed systematic and sustainable model for growth.
- Built capacity within Central Valley organizations to effectively access State-funding programs for clean transportation and expand electric mobility in rural areas.
- Exposed more residents of the Central Valley to the social benefits of electric vehicles.
- Created outreach, education, and training programs in Spanish for both rideshare users and community members to communicate the social benefits of electric mobility.

Accomplishments

- Green Raiteros Volunteer Driver application & training scheduled
- Volunteer Driver Trainings Sessions
- Onboarded (11) new volunteer drivers
- Client Medical Trips –
 - April provided (21) two-leg rides, a total of 1,734 miles
 - May provided (23) two-leg rides, a total of 2,386 miles
 - June Provided (18) two-leg rides, a total of 1,628 miles
 - 62 total completed trips and more scheduled

- Client list has more than 55 community members
- Medical Trip distribution: Hanford (23), Fresno (29), Bakersfield (2), Lemoore (6) Madera (2)
- Clinic Research - Operations staff continues to compile spreadsheets of facilities from trip database and existing GIS inventories across the GR service counties (Fresno, Kings, Tulare) in order to begin establishing contract relationships.

Partnerships and Future Funding Opportunities:

Mobility Development Partners, Purepecha Construction, Fresno State College Office of Community and Economic Development and Turn Key are a few of the examples of relationships focusing on scaling up the Green Raiteros operation.

Green Raiteros continues to cultivate funders and financial institutions such as The California Endowment, Beneficial State Bank Foundation, The 11th Hour Project and San Joaquin Valley Air Resource Board to continue advancement of EV uptake and clean shared mobility networks. The Green Raiteros advisory group is focused on providing advice on the start-up tasks for the organization such as coordinating the service with other existing transit options and building relationships with clinics, medical facilities and other service related business and relationship development to continue to set Green Raiteros on a path to scale up to close gaps and add value to existing service providers through contracting and service agreements.

The Green Raiteros Executive Director worked in Q2 2019 to secure future funding opportunities with various local entities: HealthNet, Fresno County Department of Public Health, Kings County Human Services Agency, and Centro la Familia.

Green Raiteros has been instrumental in educating Huron community and surrounding rural communities regarding the Clean Vehicle Assistance Program, Beneficial State Bank (BSB) Foundation’s electric vehicle financing program whose goal is a path to EV ownership. The program has been so successful it is working on a securing a 2nd round of funding to disperse in late 2019.

Green Raiteros will continue to cultivate its relationship with ITS-Davis, as ITS-Davis expressed a need to partner with a community-based organization that can serve as an important conduit for components of their research activities, like outreach and surveys, about EVs and EV technology in a disadvantaged community. The LEAP Institute is in a great position to leverage existing resources to take the lead and achieve success and notoriety with such an effort. The Office of Community and Economic Development (OCED) at Fresno State University has elevated the marketing reach of the Green Raiteros program. OCED will contribute to the marketing project by coordinating the multi-cultural media outreach and marketing material development activities.

EACH

The Electric Access Charging Hub (EACH) project aims to enable EV access and to spur the adoption of electric vehicles in neighborhoods disproportionately impacted by pollution by providing publicly available fast charging, supporting EV carsharing and ridesharing, and through community outreach.

EVgo partnered with the Shared Use Mobility Center (SUMC) to provide technical guidance, stakeholder engagement, and will serve to evaluate the project implementation. EVgo developed seven charging hubs equipped with four 50kW dual-standard (CHAdeMO and SAE Combo) DCFC located in disadvantaged communities in the Bay Area, LA basin, and San Diego. The stations comply with California ADA requirements and in some cases include additional parking per hub to accommodate overflow parking which can be dedicated to an EV carshare or rideshare partner.

While 2019 marked the first deployments of EACH hubs, network data from 2018 evidenced the value of siting larger footprint fast charging stations in densely populated metropolitan or suburban centers for fleets and shared mobility. For example, upon opening a six-charger (3 x 50kW and 3 x 150kW) site in Sacramento in May 2019, EVgo witnessed immediate utilization from Maven Gig as well as drivers of the hourly car rental service offered by AAA Gig Car Share. Actively serving dense urban populations with larger sites improves the customer experience and reduces the congestion that we have seen in San Francisco and in Los Angeles, in real terms by increasing the likelihood of an available charger and reduced queuing time.

The public fast charging network deployed by EVgo through the NRG settlement has enabled light duty fleet (LDV) electrification (e.g. rideshare, car sharing, and other fleet applications) in California. Charging by these vehicles represented one third of energy delivered in 2018 and represented the most significant driver for increased utilization on the EVgo network in 2018. With 3 to 7 times higher vehicle miles traveled (VMT) than personal-use drivers, electrified rideshare delivers higher GHG emission reductions and improved air quality. Because of this network, we have been approached by all the rideshare companies, including GM's Maven Gig, WaiveCar, AAA Gig Car Share, and Envoy. All of these operators recognize that large footprint fast charging installations are critical to enabling the electrification of the vehicles that deliver some of the highest VMT in the State.

Building on EVgo’s geographically dispersed network, deployments like EACH ensure that the Californians most impacted by pollution burden stand to benefit from electrified transport. Furthermore, the introduction of CARB’s \$17 million award to fund Clean Mobility Options for Disadvantaged Communities (Clean Mobility Options) will further support communities seeking to diversify and expand electric carshare options in California. Communities with EACH hubs—Inglewood, Compton, Anaheim, Richmond (2 locations), San Diego, and San Leandro— stand to further benefit from the Clean Mobility Options now that the foundational piece of public fast charging will be opening throughout Q3 2019.

Ancillary benefits of electric fleets in car share or rideshare include providing positive first impressions to customers experiencing a defacto “ride and drives” as part of their rideshare trips. EVgo customer feedback indicates that drivers and riders alike love the benefits of electric vehicles, including the quieter drive and environmental and economic benefits. In 2019, EVgo launched the [Communities Charging for Change](#) initiative as a part of the EACH program to foster and promote positive first-hand experiences with electric vehicles in conjunction with the deployment of EACH hubs. Under this initiative, EVgo partnered with community-based organizations, including Groundwork San Diego, Green for All, the Social Justice Learning Institute, and STEAM the Streets to develop the outreach, event and bring together local partners.

Each event has brought together resources to educate the public about vehicle or energy incentive programs as well as local non-profits and local businesses to produce diverse family-friendly events. EVgo has continued to ensure that shared and electric mobility is represented by:

- Alerting fleet partners and drivers of the new and larger sites
- Inviting fleet partners and rideshare companies to EACH hub openings
- Connecting with local car dealerships and EV owners
- Connecting with other partners working in the mobility space to promote the new infrastructure

EVgo has held three events to date, including in Anaheim, Richmond and San Diego in the summer of 2019. The most recent event, in San Diego, was led by Groundwork San Diego in partnership with Northgate Gonzalez Market and EVgo, to present the Healthy People Healthy Planet Expo on site at 1410 South 43rd Street, Northgate’s largest grocery store in the area. The event featured a ride and drive offered through the Center for Sustainable Energy (CSE), demonstration EVs by the Electric Vehicle Association of San Diego, and other exhibitors, including EVgo and SDG&E to disseminate information about the economic and environmental benefits of electric vehicles, and the accessibility of these vehicles through rebates and other incentives. Other features of the event included back to school backpack

giveaways and food and beverages from Northgate Market, as well as entertainment by 104.5 Spanish language radio, including a live broadcast onsite during the event.

Local elected officials, including City Council President Georgette Gómez (District 9) and Councilmember Vivian Moreno (District 8), joined the event to share in the learning about the value and accessibility of electric vehicles.

As of the Reporting Date, six of the seven EACH hubs have received final building inspection²⁰, with five sites fully operational in San Diego, Anaheim, Inglewood, and in Richmond (two locations).

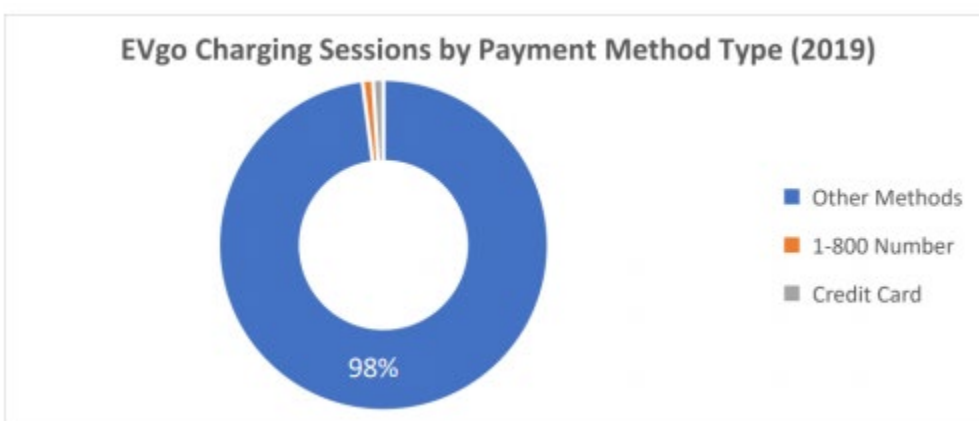

Region	Required	Distribution	Waiting on Utility	Operational
LA	-	3	1	2
SD	-	1		1
SF	-	3	1	2
Total	7	7	2	5

²⁰ As of the reporting date, 6 of the 7 EACH hubs are complete, with the remaining site awaiting utility activity to receive its final building inspection, which is projected to be completed and operational by late September 2019.

OTHER TOPICS

Credit Card Readers:

Over the course of the Settlement, NRG and EVgo have worked with equipment manufacturers and networking services companies to offer options to customers seeking to charge their electric vehicles and pay for a single use session with a credit card. At times, technological challenges have required different approaches to deliver on this obligation. As of September 2019, EVgo has installed equipment with built-in credit card readers or has completed credit card retrofits on operational stations.²¹ While the goal of trying to increase accessibility to EVSE through requiring credit card accessibility is well-intentioned, the reality of credit card usage at our existing sites shows that credit card readers are not customers' preferred method of payment. In fact, our data shows that approximately 1% of payment sessions have been initiated by credit card in 2019; these numbers remain unchanged since 2018.

Despite data demonstrating that less than 1% of transactions take place on a credit card reader, electric vehicle service providers must install credit card readers on all new DC fast chargers starting in 2022 per new CARB regulations.

Moving forward, EVgo expects to see increased payment sessions being initiated by mobile app, RFID, Apple, Google Pay, and Autocharge²². EVgo is the first North American charging network to deploy Autocharge, a technology that can enable customers to start a fast charging session in seconds, without an app, RFID, or other credential. This was launched first for GM's Maven Gig members and will soon be deployed to all CCS chargers on EVgo's nationwide network. This new option for payment, similar to what FastNed has deployed in the Netherlands, was implemented by EVgo ahead of industry-wide implementation of the ISO 15118 'Plug&Charge' standard, which we continue to work to support as well.

²¹ A number of constructed sites will receive credit card retrofits at the time of site commissioning.

Utility Rate Design + Pricing

Rates remain a major driver of costs for the operation of DC fast chargers. Demand charges do not reflect the unique load profile of a DC fast charger; demand charges to customers are typically based on the highest average 15 minutes in a monthly billing cycle. However, DC fast chargers are currently characterized by having a low load factor, with sporadic instances of high energy use due to a limited number of vehicles in the market that will use these stations in the near term. In combination, this usage patterns subjects DC fast chargers to significant demand-based charges. Additionally, unlike traditional commercial customers on demand-based rates, site hosts and EVSPs offering public DC fast charging have limited ability to manage or mitigate the impact of demand charges without negatively impacting the EV driver, all while peak demand may be punitive whether or not it is coincident with the broader grid peak.

In 2019 EVgo differentiated pricing to reflect the costs in the three major Investor Owned Utilities (IOU), PG&E, SCE and SDG&E. In California, SCE was the first IOU to introduce new commercial EV charging rates; the rates became available in March 2019.²³ The key feature of the new SCE rates is a five-year holiday from all demand charges, with the expectation that EV penetration will be higher after the holiday, reducing the demand charge penalty at many of what are today low-utilization charging stations. The SCE rate provides longer term certainty for customers, and as a result, the pricing for EVgo customers in the LA Area, Orange County, and the Inland Empire is currently its lowest retail rate in the state. By contrast, SDG&E has some of the highest electricity prices in the country, has been slow to address rate design, and, as such, is reflected in EVgo's retail pricing, the highest regional price in the state.

Demand charges will become less of an issue once the load factors of charging stations increase to levels typical of other commercial loads. However, with current vehicle deployments and electric rates structures, demand charges will remain a key barrier to the deployment of DC fast chargers. Commercial EV charging rates are critical for increasing the viability of transportation electrification for renters, fleets, rideshare drivers, and others who utilize public fast charging. Utilities across the country are recognizing that the demand charge barrier must be breached by new rate designs if the public infrastructure for EV charging is to grow, and NRG and EVgo are appreciative of the thoughtful work the CPUC is leading under the transportation electrification order instituting rulemaking and other efforts.

²³ See CPUC Decision 18-05-040, Ordering Paragraph 45, and SCE Advice Letter 3853-E (filed August 29, 2018) to implement the new commercial EV rates approved in that order.

Stationary Storage Plus Electric Charging (SSPEC)

The Stationary Storage Plus Electric Charging (SSPEC) project used stationary batteries in a technology demonstration application to reduce the cost of operating DC fast chargers (Level 3) and alleviate strain on the grid.

The SSPEC project successfully:

1. Deployed a test site with microgrid components, including battery storage, solar generation, EV charging infrastructure, and site control technology
2. Tested various configurations of distributed energy resources and electric vehicle DC fast chargers
3. Analyzed results from operation of the SSPEC site and historical data from EVgo's charging station network to identify load profiles, potential sites, and utility territories which can benefit most from stationary storage and/or generation on site

Under the Settlement, EVgo has completed or has in construction 12 battery storage systems located at 9 fast charging stations in California. EVgo installed second-life battery systems at Union City and Baker, California, as part of the SSPEC project and has completed the installation of first-generation battery systems at 3 Freedom Stations.

The SSPEC project provided critical learnings and revealed practical challenges for the implementation of energy storage on a small-scale. Second-life batteries are not packaged or fully guaranteed by a single provider and as a result any issues required the coordination of multiple companies and prolonged resolution times. By the time the first energy storage systems received their permit to operate, the impact of rate design eliminated the savings impact. The increased deployment cost for energy storage did not result in a net savings that could be passed through to the customer.

This experience has shown that from the standpoint of public charging infrastructure, technology solutions are not and cannot be a substitute for rate design. While it is practical to manage relatively simple time of use rates, EVgo is concerned about overreliance on technology solutions as a substitute for sound rate design. Additionally, other suggested paths for the use of energy storage including demand response or load management could diminish consumer experience and discourage adoption if an EV driver arrives at a public DCFC station and is unable to receive the state of charge expected on their commute home. EVgo is encouraged by the efforts of California utilities to introduce new commercial rates more in line with the use case of DC fast charging.

EV Storage Accelerator (EVSA)

The EV Storage Accelerator (EVSA) aims to demonstrate vehicle-to-grid (V2G) technology as a low-cost energy storage resource. The project used nine vehicles for the demonstration, three Honda Accord Plug-in Hybrid electric vehicles (PHEVs) and six Nissan LEAF battery electric vehicles (BEVs). The four primary goals of EVSA are to:

The EVSA Project Team continued to quantify the value of V2G. All 8 of the project vehicles are successfully executing vehicle-to-grid responses based on the California Independent System Operators (CAISO) historical Automated Generation Control (AGC) signal sent from the Nuvve aggregator. The overall hardware/software system continues to be monitored for optimal operation and the bidding strategy continues to be fine-tuned based on vehicle availability.

Nuvve has collected operational data from 8 project vehicles responding to a historical CAISO AGC signal over the past six months. E3 analyzed the performance of the coalition based on this data and calculated how a coalition of EVs might be compensated through a detailed review of current CAISO market rules.

Based on the calculations in this report the EVSA coalition at USCD would have earned \$5 per vehicle per month or \$62 per vehicle per year on average from a combination of capacity, mileage, and non-compliance settlements. These revenues are aligned with previous studies and those achieved by the LA Air Force Base EV coalition.

Deliverables: The following deliverables are due to the CPUC and stakeholders in Q3 2019 following the completion of Q2 2019 data collection at the end of June 2019:

- Final Data Analysis Report Module
- Final Project Report to the CPUC
- Final Project Fact Sheet
- Final Public Facing Presentation Slides
- Final V2G Action Plan

Extreme High-Power DC Charging Station

Automakers are continuing to increase range of EVs by increasing battery capacities, as evidenced by the late-2016 release of the all-electric Chevy Bolt with 238 miles of range and additional price competitive longer-range vehicles like the Nissan LEAF Plus, Kia Niro, Hyundai Kona, and others. To maintain a consistent customer / EV driver experience regarding charge duration and SOC (State of Charge) completion percentage, DC EVSE infrastructure may need to increase the power level of charging infrastructure (i.e. increase the rate at which energy is delivered into the electric vehicle battery) in certain use cases

This project is intended to bring auto OEMs, EVSE, and cable manufacturers together to demonstrate and facilitate testing and development of standards and equipment. The project will do the following:

- Deploy first of its kind electric vehicle supply equipment (EVSE) infrastructure capable of high-power DC charging (300+ amps).

EVgo's high-power charging station in Baker, CA became fully operational in Q4 2018 with (2) ABB 50 kW chargers, (2) BTC 150 kW chargers, (1) ABB 175 kW charger, and (1) ABB 350 kW charger. Since the station has been operational EVgo has been monitoring the usage and operation of the high-power chargers at the site and has seen cars charging above 50 kW in Q2 2019.

- Test with auto original equipment manufacturers (OEMs) and EVSE providers to allow for test bed and development of standards.

EVgo plans to gather more charger/vehicle combination data sets to perform further analysis and inform recommendations to industry stakeholders. EVgo will continue testing commercially available vehicles on high-power chargers and will submit a full High-Power DC Charging Technology Demonstration Report by end of Q3 2019 in accordance with technology demonstration project reporting requirements. Additionally, a number of automakers have reached out to do proprietary high temperature high-power charging at this site, consistent with the intent of the Settlement.

EVgo will continue controlled charger and vehicle testing now that the technology demonstration high-power charging stations are fully operational. The goal of testing will be to determine the charge curves of different commercially available electric vehicle models on chargers of different power levels. The information on charge curves and charge times when combined with cost of different charger power levels will help inform policy makers and commercial partners on the costs and benefits of deploying different charger power levels.
